

Project Understanding

AI Business OS – Web Application

Target Audience - Small-to-medium enterprises (SMEs), larger organizations and individuals

Advantage – AI-driven operating system, will replaces SaaS tools such as CRMs, SEO tools (DM), design suites, and HR APP etc.

Setup Cost: Inr - 49K

Design of a Dashboard for End User

1. Users complete an Multi-step on boarding questionnaire and connect existing tools (website, Google Analytics, social media) to build a permanent "business profile".
2. The platform uses this profile to generate hyper-personalized marketing strategies, lead generation lists, proposals (via RAG knowledge bases), SEO recommendations, and social content tailored to regional norms and brand voice.
3. Will reduce a cost and complexity

Design of a Dashboard for Backend - Team

Design of a Dashboard for Admin – Collect a data

Resources Required

1. **Full-Stack Engineer(s)**: Frontend design and implementation
2. **AI / Integration Engineer**: Handling LLM prompting structures, JSON output schemas, Retrieval-Augmented Generation (RAG) pipelines, and third-party OAuth flows (Google, Meta, Accounting).
3. **UI/UX Designer**: Dashboard design and user in traction
4. **QA / Tester**

Third-Party Services & APIs

- **LLM Provider**: Claude or OpenAI GPT APIs etc
- **Keyword Data Provider**: DataForSEO or Semrush API. etc
- **Database & Hosting Provider**: Supports PostgreSQL or SQL Server with AZ
- **Payment Gateway**
- **Workflow Automation**

Appropriate Technology

- **Frontend (Web App)**: Next.js (React) for SEO optimization on the marketing site and dynamic rendering of the complex dashboard app.
- **Backend / API**: Python or/and Dot Net for API and LLM SDK calls.
- **Database & Storage**: Postgre SQL/SQL Server
- **Authentication**: Authentication (OAuth)
- **Styling**: Tailwind CSS

Roadmap to Start Development

- Environment Setup & Architecture Finalization
- Public Site & On boarding
- Core Dashboard & AI Generation Engines
- Integrations & Data Modules
- Billing, Testing
